Xata Turnpike Supports Google's Android™, North America's Largest Mobile Platform
Fleets and drivers of all kinds now have more options for running Xata Turnpike,
the industry's most cost-effective electronic onboard recorder (EOBR)

MINNEAPOLIS (June 8, 2011) —Xata Corporation (NASDAQ: XATA), a leader in fleet optimization software, today announced that its Xata Turnpike fleet management and compliance solution now supports the Google Android™ mobile-device operating system across multiple wireless carriers.

The fastest-growing mobile platform in North America, Android gives customers more feature-rich mobile device options for running Xata Turnpike, routinely mentioned by the Federal Motor Carrier Safety Administration (FMCSA) as the most cost-effective electronic onboard recorder (EOBR) on the market. The Android platform also gives Xata Turnpike users functionality on the new Samsung Galaxy Tab, a tablet computer for email, web browsing and other multimedia tasks.

"Xata Turnpike has always been known for being driver friendly, and we're now going to be known for being the most device-friendly fleet management solution on the market," said Christian Schenk, vice president, product marketing, Xata. "Our support of Android and our upcoming launch of the industry's first fleet management system for an inexpensive, off-the-shelf tablet computer enhances Xata's reputation as an industry pioneer and further secures our leadership position in the market."

By bringing its easy-to-use tools to the Android operating system, Xata can now better serve the growing number of fleets and drivers who are seeking affordable solutions to help them adhere to the Compliance, Safety, Accountability (CSA) program, FMCSA's initiative for reducing commercial motor vehicle accidents.

Xata Turnpike is already certified to run on several Android-enabled smartphones, and additional Android devices will be certified in the coming weeks, including the Samsung Galaxy Tab. The largest Galaxy Tab comes with a 7-inch, high-resolution touchscreen, giving drivers what they want most: an extra-large screen with an easy-to-use hours of service (HOS) graphical interface that supports fingertip scrolling and pinch-to-zoom.

The Galaxy Tab and all Android-enabled devices certified for Xata Turnpike are ideal for drivers who want to run their fleet management system on the same device they use for off-duty activities, such as emailing, web browsing, reading and watching TV or movies.

Additionally, Xata Turnpike for Android includes a mobile API that third-party applications can leverage to access basic vehicle and driver information, including driver and vehicle identification numbers, mileage, motion, speed and GPS.

About Xata
Xata Corporation (NASDAQ: XATA) provides intuitive, automated fleet management software solutions to the trucking industry. By delivering real-time critical information on vehicle and driver performance, Xata makes it easy for fleet managers, dispatchers and drivers to collect, sort, view and analyze data to help reduce costs, increase safety and compliance, and improve customer satisfaction.

Our award-winning solutions include 1) XataNet, a full-featured, enterprise-wide solution that helps private and for-hire fleets drive continuous improvement, and 2) Xata Turnpike, a technologically advanced, low-cost, easy-to-install solution that runs on drivers' existing cell phones, smartphones and tablet computers. Both solutions help fleet managers and drivers meet established and emerging electronic onboard recorder (EOBR) regulations. We also offer a portfolio of professional services, including implementation, training and consulting, to help our customers deliver bottom-line results. For more information, visit www.xata.com or call 1.800.745.9282.
